Evaluation Tips

Pam Sigler, Senior Extension Specialist

Turning Technologies (referred to as “the clickers”) is a way to keep clients engaged, collect feedback to insure understanding and retention of information, and evaluate and collect data during Extension programs. The software is available free from the UK Download site <https://download.uky.edu/>. On the left hand column, click on “Classroom” then scroll down or search for “TurnPoint.” Sets of response ware (clickers) are available in Dr. Henning’s office, in some county offices and in some CAFE departments.

Turning Technology continues to improve their product. Turning Point can be used during on-line trainings (TurningPoint Cloud), self-paced polling for testing, and create word clouds from client written responses.

Turning Technologies website ([click here](#)) provides training and support. In the fall, company representatives are on campus to conduct in-depth training session for those new to the system. UK Instructional Technology will have dates and locations of trainings using TurningPoint, Canvas, and smartsheets.
