Teaching Tips

Tanya C. Dvorak, Ph.D., Senior Extension Specialist

Teaching and learning occurs in many venues. Extension educators often intertwine technology into educational programs in classroom type settings as well as on farm visits. It is great to enhance teaching and learning with technology when it is appropriate. Remember that technology is not just a PowerPoint and a computer. You may use multiple types of technology during your Extension programming, however, be sure to use the correct type of technology to enhance your teaching and clientele learning.

Technology may also be used to share educational resources, such as Extension approved Apps can provide timely information for clientele, Extension social media sites can provide research based information to clientele, and your county Extension websites can also be an avenue for community members to locate useful knowledge.

While technology is a great tool for educational programs, do not forget that not all community members have embraced all types of technology on farms, in their families, or in their cultures. Be sure to find ways to connect with your clientele to meet them where they are...with or without the newest technological tools.
